

TESTIMONIALS: SANDRA:

Involved in an auto accident a number of years ago & has severe neck injuries. WBV has really helped her neck & also her knee which has given her

lots of problems for quite a few years.

BOB: Has had terrible neck problems for years, tried the machine twice & his neck problems went away & all the pain went away.

ANGIE: In their Chiropractor office they are very excited about the results they are seeing in their patients. Increased energy! Better sleep! Increased strength. Weight loss too!

SHARICK PECK, PT: As WBV lines up parts of the nervous system, people experience less pain, increased range of motion, increased blood flow.

DR. LARRY ZIEGLER, CP: Joints require movement to experience blood flow, cleansing & nourishment. 10 minutes of WBV is like 60 minutes of walking/ motion exercise.

Relaxation brought on by Whole Body Vibration has a diminishing effect on pain by the release of endorphins, enkephalin and other pain-reducing neuro-chemicals. Sensory receptors are activated that stimulate and soothe the nervous system.

Results will depend on the amplitude and the frequency applied. The nerves respond to the rhythmic movements of the vibration because of the excitement to the nervous system. Increases relaxation.
